

Maps of Regions of Provenance

Till date, no areas in Malta have been designated or approved by the responsible official body as regions of provenance in Malta for the production of "source-identified" and "selected" categories of forest reproductive material. Therefore, Malta does not have any maps of the regions of provenance. On the other hand, Malta cannot exclude the possibility of having regions of provenance in the future as the afforestation sector in Malta is undergoing some changes.

Community list of approved basic material for the production of forest reproductive material

Since Malta currently does not produce basic material, it cannot provide any information as regards the national list on each "unit of approval" as specified in Commission Regulation (EC) No 1597/2002. Therefore, it cannot provide any contribution for the moment to the list of approved basic material for the production of forest reproductive material.

Importation of forest reproductive material

Till now, the Plant Health Department has not received any requests for the importation of basic material from approved third countries and therefore, Commission Decision 2005/942/EC was never used.
